Branch protection rule

Branch name pattern *

master

Applies to 1 branch

master

Protect matching branches

☒ Require a pull request before merging

When enabled, all commits must be made to a non-protected branch and submitted via a pull request before they can be merged into a branch that matches this rule.

☒ Require approvals

When enabled, pull requests targeting a matching branch require a number of approvals and no changes requested before they can be merged.

Required number of approvals before merging: 1

☐ Dismiss stale pull request approvals when new commits are pushed

New reviewable commits pushed to a matching branch will dismiss pull request review approvals.

☐ Require review from Code Owners

Require an approved review in pull requests including files with a designated code owner.

Upgrade to GitHub Pro or make this repository public to enable CODEOWNERS.

Upgrade now

☐ Require approval of the most recent reviewable push

Whether the most recent reviewable push must be approved by someone other than the person who pushed it.

☒ Require status checks to pass before merging

Choose which [status checks](#) must pass before branches can be merged into a branch that matches this rule. When enabled, commits must first be pushed to another branch, then merged or pushed directly to a branch that matches this rule after status checks have passed.

☐ Require branches to be up to date before merging

This ensures pull requests targeting a matching branch have been tested with the latest code. This setting will not take effect unless at least one status check is enabled (see below).

🔍 Search for status checks in the last week for this repository

No required checks

No checks have been added

☐ Require conversation resolution before merging

When enabled, all conversations on code must be resolved before a pull request can be merged into a branch that matches this rule. [Learn more about requiring conversation completion before merging.](#)

☐ Require signed commits

Commits pushed to matching branches must have verified signatures.

☐ Require linear history

Prevent merge commits from being pushed to matching branches.

☐ Require deployments to succeed before merging

Choose which environments must be successfully deployed to before branches can be merged into a branch that matches this rule.

☐ Lock branch

Branch is read-only. Users cannot push to the branch.

☐ Do not allow bypassing the above settings

The above settings will apply to administrators and custom roles with the "bypass branch protections" permission.

Rules applied to everyone including administrators

☐ Allow force pushes

Permit force pushes for all users with push access.

☐ Allow deletions

Allow users with push access to delete matching branches.
